

Luis Cano Irigoyen

– Spanish (Native) – English (CEFR: C2)

Location: Mexico, open to remote or relocate

Data Analyst operating across **analytics engineering and production data systems**. Strong focus on **large-scale automated decisioning systems** development. Adept at data modeling, experimentation & turning raw data into programmatic product optimizations.

Research interests: LLMs, Deep Learning, Natural Language, Ethics in Research & Data

EDUCATION

UC Berkeley

Master of Information and Data Science

United States (remote), 08/2026 – Expected 2028

Coursework:

- Research Design and Applications for Data and Analysis, Statistics for Data Science, Applied Data Engineering

Tecnológico de Monterrey (ITESM)

BSc in Computer Science

Mexico, 08/2019 – 06/2023

Concentration in **Advanced Artificial Intelligence for Data Science**.

Coursework:

- Software Engineering, Statistics for Data Science, Artificial Intelligence for Data Science, Machine Learning, Data Structures & Algorithms, Mathematical Modeling, Strategic Planning, Software Architecture, Project Management.

WORK EXPERIENCE

Envato (Shutterstock) elements.envato.com

Senior SEO Data Analyst (2026 – Present)

Australia (remote), 04/2023 – Present

SEO Data Analyst II & III (2023 – 2025)

- Own the **SEO domain's data architecture and Redshift to Snowflake migration**. Authored the target architecture (Dockerized extraction → Iceberg schema → data contracts → raw/staging → event modeling → shared intermediate components → facts/dimensions → marts) and designed two migration programmes end-to-end – for programmatic products and reporting.
- Designed and shipped a **production content-quality decisioning system** synthesizing crawler activity, search and engagement signals to no-index low-quality pages and no-follow links to them, decisioning **13M+ item pages daily**; within 3 months, indexed pages grew up to +81% in key categories and monthly organic signups rose 21%, vs. prior-year sustained declines.
- Defined and evolved a **programmatic data application** optimizing crawl budget across virtually unlimited search listing pages; root-caused core ranking defects (mis-crediting 45% of top-ranked pages) and authored the redesign adopted by engineering.
- Engineered a **URL classification system in dbt** (parser macro + classification models) decomposing every storefront URL into language, page type, taxonomy, and search-intent keys, defining the vocabulary powering Google Search traffic attribution to high-dimensional term-filter combinations, used within automated indexation systems and the SEO reporting estate.
- Designed **automated internal linking data products** using dbt to connect 2M+ items and listing pages, leveraging **user behavior signals and semantic relationships for graph-based connectivity**, reducing orphaned pages from 30% to under 5%.
- Implemented **end-to-end Python-SQL pipelines** incorporating **Transformer-based topic modeling, LLM representations and in-warehouse Snowflake Cortex embeddings**, productionizing deep learning and NLP workflows for content strategy.

Forte Industria forteindustria.com

Business Analyst

Mexico, 06/2021 – 03/2023

- Business Analyst and SEO Consultant at early-stage retailer, **developing the site and analytics stack** from the ground up.
- Introduced company into online industrial market, reaching 2k+ monthly users in year one.
- **Analyzed user behavior and traffic segments** to identify high-engagement patterns and inform site-wide optimization.
- Designed and executed **A/B experiments** to evaluate UI and SEO performance, focusing on testing to drive iterative improvements in traffic and user engagement.

Pixelwork Agencia Web MX

Web Developer & Marketing Analyst

Mexico, 06/2019 – 04/2021

- Managed **technical performance optimizations for client websites** – web health metrics, infrastructure reliability, and data-driven site speed improvements.
- Performed **SEO data audits to identify technical patterns and anomalies**, leveraging auditing tools to improve search visibility and organic performance across diverse client domains.
- Managed **market and product analytics** initiatives, evaluating campaign performance and optimizing advertising spend.

Luis Cano Irigoyen

OTHER PROJECTS

Reddit Trends Extraction & BERTopic Optimizations — Envato (*Independent Project*)

articles: luiscanoi.github.io/reddit-trends-extraction.html luiscanoi.github.io/transformer-embeddings-pipeline-optimization.html

- Designed and developed an **end-to-end programmatic pipeline to extract and analyze emerging topics** from curated subreddits, transforming raw community conversations into actionable semantic insights.
- Implemented **topic modeling using BERTopic**, leveraging **Transformer-based embeddings** and c-TF-IDF (Class-based Term Frequency-Inverse Document Frequency) to identify niche trends.
- Developed a custom **“recency-weighted engagement growth” framework**, using logarithmic scaling for post-weighting and time-decayed relative change, normalizing engagement metrics across communities of varying sizes to prevent data bias.
- **Optimized high-dimensional clustering performance** by implementing a **MiniBatchKMeans coreset selection strategy**, fitting the model on a representative subset to achieve significant memory and speed gains while maintaining semantic integrity during the mapping phase.
- Synthesized **topic representations using LLM summarization**, transforming BERT-based clusters into human-interpretable insights, surfacing "exploitation-ready" trends.

Cryptocurrency Forecasting with Sentiment Analysis and Deep Learning

[link to project](#)

- Developed a **multi-modal deep learning architecture** in PyTorch to predict short-term price fluctuations by **combining unstructured sentiment data** from news articles **with high-frequency market time-series**.
- Implemented a **dual-branch neural network** using an **Attention-based LSTM** for temporal memory and an **Autoencoder LSTM** for feature extraction and dimensionality reduction of vectorized text embeddings.
- Optimized model performance using **MSELoss** as the primary objective function, using custom training loops with validation/test splits to mitigate overfitting.
- Engineered a **time-series feedback loop** to retain temporal memory across prediction windows, refining the integration of sentiment signals to improve short-term (1-week) forecasting accuracy.

RELEVANT SKILLS

Programming Languages: Python, SQL (PostgreSQL, GoogleSQL, SQLite, MySQL), R, MATLAB, basic JavaScript

Tools: dbt, Git, Snowflake, AWS (S3, Redshift, Athena, Glue), GCP (BigQuery, APIs), Docker, Tableau, Iceberg, Google Analytics, GSC

Frameworks: Pandas, Polars, PySpark, NumPy, Sentence Transformers, LLMs, SciPy, Scikit-learn, TensorFlow, PyTorch

Technical Skills: Data Modeling, ETL/ELT Pipelines, Statistics, Data Science, Causal Inference, AI Integration (LLMs API), Machine Learning, Forecasting, A/B Testing, Software Development, Visualization, Analytics, Attribution Modeling, Agile

Transferable Skills: Analytical Thinking, Debugging & Problem Solving, Cross-functional Collaboration, Continuous Learning
