

Luis Cano Irigoyen

– English (CEFR: C2) – Spanish (Native)

Location: Mexico, open to remote or relocate

Data Analyst with a strong focus on **Analytics Engineering** projects and **Data Source app development**.

Adept at data modeling & turning raw data into actionable insights and programmatic solutions.

Foundations in Software Engineering with Data Science concentration.

Research interests: Data Science, Engineering, LLMs, Transformer Embedding models, Deep Learning, Forecasting

EDUCATION

UC Berkeley

Master of Information and Data Science

Starting in **Fall 2026** – Expected done by Summer 2028

I'll be completing the graduate program in remote modality, all classes will be in my evenings.

Tecnológico de Monterrey (ITESM)

BSc in Computer Science

Mexico, 08/2019 – 06/2023

Concentration in **Advanced Artificial Intelligence for Data Science**.

Relevant Coursework:

- **Software Engineering**, Advanced **Statistics for Data Science**, Advanced **Artificial Intelligence**, SQL & NoSQL **Databases**, **Machine Learning**, Intermediate **Mathematical Modeling**, Compilers, Data Structures & Algorithms, Strategic Planning, Software Architecture, Project Management.

WORK EXPERIENCE

Envato (Shutterstock) elements.envato.com

Senior SEO Data Analyst (2026 – Present)

Australia (remote), 04/2023 – Present

SEO Data Analyst II & III (2023 – 2025)

- Defined and maintained a **programmatic data application** to optimize crawl budget across virtually unlimited search listing pages, gaining expertise in the development of **automated indexation logic** prioritizing high-conversion SRPs and the **design of scalable systems**.
- Engineered a **DBT attribution pipeline** that programmatically resolves inconsistent search page URLs into search-intent keys, enabling **reliable attribution of Google Search traffic to high-dimensional term-filter combinations** used to safeguard traffic-driving search listings within automated indexation systems.
- Designed **automated internal linking data products using DBT** to connect 2M+ items and listing pages, leveraging **user behavior signals and semantic relationships to apply graph-based connectivity** improving discoverability site-wide.
- Implemented **end-to-end Python-SQL pipelines** incorporating **Transformer-based topic modeling and LLM representations**, productionizing deep learning embeddings and NLP workflows for content strategy.
- Developed a **data-driven framework to identify low-quality item detail pages** by synthesizing item metadata, crawler bot activity and performance metrics, **translating multivariate signals into scalable no-index rules** to improve content quality.
- Built unified **analytics workflows across Snowflake, BigQuery, and AWS** to support new Organic Search attribution models and dashboards, enabling search performance drilldowns and improving visibility on metrics that matter.

Forte Industria forteindustria.com

Business Analyst

Mexico, 06/2021 – 03/2023

- Business Analyst and SEO Consultant at early-stage retailer, **developing the site and analytics stack** from the ground up.
- Introduced company into online industrial market, reaching 2k+ monthly users in year one.
- Conducted quantitative **analysis of user behavior and traffic segments**, applying analytical methods to identify high-engagement patterns and inform site-wide strategic optimizations.
- Designed and executed **A/B experiments** to evaluate UI and SEO performance, focusing on testing to drive iterative improvements in traffic and user engagement.

Pixelwork Agencia Web MX

Web Developer & Marketing Analyst

Mexico, 06/2019 – 04/2021

- Managed **technical performance optimizations for client websites**, developing a deeper understanding of web health metrics, infrastructure reliability, and data-driven site speed improvements.
- Performed **SEO data audits to identify technical patterns and anomalies**, leveraging auditing tools to improve search visibility and organic performance across diverse client domains.
- Managed **market and product analytics** initiatives, applying quantitative methods to evaluate campaign performance and optimize advertising spend.

Luis Cano Irigoyen

OTHER PROJECTS

Reddit Trends Extraction & BERTopic Optimizations — Envato (*Independent Project*)

articles: luiscanoi.github.io/reddit-trends-extraction.html luiscanoi.github.io/transformer-embeddings-pipeline-optimization.html

- Designed and developed an **end-to-end programmatic pipeline to extract and analyze emerging topics** from curated subreddits, transforming raw community conversations into actionable semantic insights.
- Implemented **topic modeling using BERTopic**, leveraging **Transformer-based embeddings** and c-TF-IDF (Class-based Term Frequency-Inverse Document Frequency) to identify niche trends.
- Developed a custom **“recency-weighted engagement growth” framework**, using logarithmic scaling for post-weighting and time-decayed relative change, normalizing engagement metrics across communities of varying sizes to prevent data bias.
- **Optimized high-dimensional clustering performance** by implementing a **MiniBatchKMeans coreset selection strategy**, fitting the model on a representative subset to achieve significant memory and speed gains while maintaining semantic integrity during the mapping phase.
- Synthesized **topic representations using LLM summarization**, transforming BERT-based clusters into human-interpretable insights, surfacing "exploitation-ready" trends.

Cryptocurrency Forecasting with Sentiment Analysis and Deep Learning

[link to project](#)

- Developed a **multi-modal deep learning architecture** in PyTorch to predict short-term price fluctuations by **combining unstructured sentiment data** from news articles **with high-frequency market time-series**.
- Implemented a **dual-branch neural network** using an **Attention-based LSTM** for temporal memory and an **Autoencoder LSTM** for feature extraction and dimensionality reduction of vectorized text embeddings.
- Optimized model performance using **MSELoss** as the primary objective function, using custom training loops with validation/test splits to mitigate overfitting.
- Engineered a **time-series feedback loop** to retain temporal memory across prediction windows, refining the integration of sentiment signals to improve short-term (1-week) forecasting accuracy.

RELEVANT SKILLS

Programming Languages: Python, SQL (PostgreSQL, GoogleSQL, SQLite, MySQL), R, MATLAB, basic JavaScript

Tools: DBT, Git, Snowflake, AWS (S3, Redshift, Athena), GCP (BigQuery, APIs), Docker, Tableau, Google Analytics, Search Console

Frameworks: Pandas, Polars, PySpark, NumPy, Sentence Transformers, LLMs, SciPy, Scikit-learn, TensorFlow, PyTorch

Technical Skills: Data Modeling, ETL/ELT Pipelines, Statistical Analysis, Programming, AI Integration (LLMs API), Machine Learning, Forecasting, A/B Testing, Visualization, Marketing Analytics, Attribution Modeling, Agile Development

Transferable Skills: Analytical Thinking, Debugging & Problem Solving, Cross-functional Collaboration, Continuous Learning
