

Luis Cano Irigoyen

– English (CEFR: C2) – Spanish (Native)

Location: Mexico, open to remote or relocate

Data Analyst focused on **Analytics Engineering** projects and **Data Source app development**. Adept at modeling raw data into actionable insights & programmatic solutions. Foundations in Software Engineering with Data Science focus.

Research interests: Data Science, Engineering, LLMs, Transformer Embedding models, Deep Learning, Forecasting

EDUCATION

BSc in Computer Science // Tecnológico de Monterrey (ITESM)

Mexico, 08/2019 – 06/2023

Concentration in **Advanced Artificial Intelligence for Data Science**

- **Software Engineering**, Advanced **Statistics for Data Science**, Advanced **Artificial Intelligence**, **SQL & NoSQL Databases**, **Machine Learning**, **Mathematical Modeling**, **Data Structures & Algorithms**, Linear Algebra, Multivariate Calculus for ML, Compilers, Full-stack Web Development, Strategic Planning, Software Architecture, Project Management.

WORK EXPERIENCE

Envato (Shutterstock) elements.envato.com

Australia (remote), 04/2023 – Present

Senior SEO Data Analyst (2026 – Present)

SEO Data Analyst II & III (2023 – 2025)

- Defined and maintained a **programmatic data application** to optimize crawl budget across virtually unlimited search listing pages, applying automated indexation logic, prioritizing high-conversion SRPs and driving +64% organic sessions in 3 months.
- Implemented **end-to-end Python-SQL pipelines** incorporating Transformer-based topic modeling and LLM representations with statistical trends detection, used to inform marketing Author and Content Strategy.
- Designed **automated internal linking data products using DBT** to connect 2M+ items and listing pages, leveraging user behavior signals and semantic relationships to apply graph-based connectivity improving discoverability site-wide.
- Developed a **data-driven framework to identify low-quality item detail pages** by synthesizing crawler bot activity and performance metrics, translating multivariate signals into scalable no-index rules to improve overall Site content quality.
- Built unified **analytics workflows across Snowflake, BigQuery, and AWS** to support new Organic Search attribution models and dashboards, enabling search performance drilldowns and improving visibility on metrics that matter.

Business Analyst // Forte Industria forteindustria.com

Mexico, 06/2021 – 03/2023

- Business Analyst and SEO Consultant at early-stage retailer, developing the site and analytics stack from the ground up.
- Introduced company into online industrial market, reaching 2k+ monthly users in year one.
- Analyzed website traffic and user behavior to identify segments, enabling targeted optimizations that improved engagement.
- Executed A/B testing on site UI and SEO optimizations to improve traffic performance.

Web Developer & Marketing Analyst // Pixelwork Agencia Web MX

Mexico, 06/2019 – 04/2021

- Developed sites and managed technical WordPress optimizations, improving site speed and domain health ratings for clients.
- Conducted SEO audits with Ahrefs and Yoast, boosting organic traffic across multiple client domains.
- Managed market and product analytics for clients, boosting marketing strategies and executing Google Ads campaigns.

RELEVANT SKILLS

Programming Languages: Python, SQL (PostgreSQL, GoogleSQL, SQLite, MySQL), R, MATLAB, basic JavaScript

Tools: DBT, Git, Snowflake, AWS (S3, Redshift, Athena), GCP (BigQuery, APIs), Docker, Tableau, Google Analytics, Search Console

Frameworks: Pandas, Polars, PySpark, NumPy, Sentence Transformers, LLMs, SciPy, Scikit-learn, TensorFlow, PyTorch

Technical Skills: Data Modeling, ETL/ELT Pipelines, Statistical Analysis, Programming, AI Integration (LLMs API), Machine Learning, Forecasting, A/B Testing, Visualization, Marketing Analytics, Attribution, Agile Development

Transferable Skills: Analytical Thinking, Debugging & Problem Solving, Cross-functional Collaboration, Continuous Learning

OTHER PROJECTS

Reddit Trends Extraction & BERTopic Optimizations // Envato (Independent Project)

articles: luiscanoi.github.io/reddit-trends-extraction.html luiscanoi.github.io/transformer-embeddings-pipeline-optimization.html

- Designed an **end-to-end programmatic pipeline** to extract community conversations from curated subreddits (Reddit API), transforming raw text into exploitation-ready semantic insights: trends suggestions.
- Implemented **topic modeling using BERTopic** (c-TF-IDF), leveraging **Transformer-based embeddings** and LLM representations.
- Optimized high-dimensional clustering via MiniBatchKMeans coresets selection to achieve significant memory gains.
- Developed a custom "**recency-weighted engagement growth**" framework using logarithmic scaling and time-decayed change to normalize growth metrics and prevent community size bias.

Cryptocurrency forecasting with Sentiment Analysis and Deep Learning [link to project](#)

- Developed a **multi-modal deep learning architecture** in PyTorch to predict price fluctuations by combining unstructured news sentiment with high-frequency market time-series.
- Implemented the **dual-branch neural network** using an **Attention-based LSTM** for temporal memory and an **Autoencoder LSTM** for feature extraction and dimensionality reduction of vectorized text embeddings.
- Engineered a **time-series feedback loop** to retain memory across prediction windows, utilizing custom training loops and MSELoss to refine short-term forecasting accuracy.
